

GEORGE OWULAMA ANDZUTSI

FULL STACK SOFTWARE ENGINEER | AI APPLICATIONS | REST APIs | PYTHON | REACT.JS

Nigeria | Remote | +234 810 036 2060 | andzutsiowulama@gmail.com

Portfolio: george-andzutsi.vercel.app | GitHub: github.com/evanandzutsi-eng | LinkedIn: linkedin.com/in/george-andzutsi-833948268

PROFESSIONAL SUMMARY

Early career software engineer with practical full stack development experience and a growing specialization in AI applications, API integration and workflow automation. Builds web applications end to end, working with React.js, TypeScript and JavaScript on the frontend and Node.js, Express, Python and FastAPI on the backend, connecting both layers through REST APIs. Comfortable integrating third party services, working with relational and non relational databases, and handling authentication flows during development. Applies AI APIs and AI assisted development practices directly in project work, including prompt refinement and evaluation of AI generated output rather than accepting it uncritically. Tests and debugs applications using Postman and Jest, works daily in Git and GitHub, and is comfortable with Docker, Windows Terminal, PowerShell and general CLI workflows. Approaches unfamiliar technical problems methodically, researching documentation and validating solutions through direct experimentation. Strong written communication and research background, supported by a B.Sc. in Mass Communication and field research leadership experience.

TECHNICAL SKILLS

Programming: Python, TypeScript, JavaScript, HTML5, CSS3

Frontend: React.js, Responsive Interfaces, Reusable Components, Figma, UI/UX

Backend: Node.js, Express, Python, FastAPI, REST APIs

APIs and Integrations: REST API Development, REST API Consumption, Third Party API Integration, Authentication, JWT, OAuth, Webhooks, Paystack, API Testing, Postman

Databases and Data: MySQL, MongoDB, Supabase, Neon, Redis, Upstash, Basic SQL (querying, filtering, sorting and record validation during development and testing)

Testing and Debugging: Postman, Jest, Manual Testing, API Testing, Debugging, Troubleshooting, Iterative Testing

Development Tools: Git, GitHub, Docker, Windows Terminal, PowerShell, CLI Workflows

Deployment: Vercel, Railway, Render, Netlify

AI and Automation: AI API Integration, AI Applications, AI Assisted Development, Prompt Engineering, Prompt Refinement, AI Response Evaluation, AI Behavioral Testing, Context Handling, Instruction Adherence Testing, Zapier, Make.com, API Based Workflows, AI Workflow Experimentation, Agentic AI Concepts

PROFESSIONAL EXPERIENCE

Software Developer | NASITDEA (Nasarawa State Information Technology and Digital Economy Agency) | 2025 to Present
State government owned technology agency.

- Integrate APIs and build backend systems to support the agency's digital initiatives.
- Work on backend development, connecting internal systems and services through API integration.

Independent Software Developer | Nigeria | 2024 to Present

Self directed development of personal software projects, focused on practical, working applications rather than conventional employment.

- Build full stack web applications combining React.js frontends with Node.js, Express, Python and FastAPI backends.
- Develop and consume REST APIs, connecting frontend applications with backend services and third party platforms.
- Implement authentication flows and integrate third party APIs, working through credential handling and response parsing.
- Design and manage application data using MySQL, MongoDB, Supabase, Neon and Redis.
- Write basic SQL to query, filter, sort and validate records during development and testing.
- Test APIs and application workflows using Postman, and write automated tests with Jest.
- Debug and troubleshoot issues across frontend, backend and integration layers through manual and iterative testing.
- Use Git and GitHub for source control, and Docker for containerized local development.
- Work daily in Windows Terminal and PowerShell, building comfort with general CLI workflows.

- Deploy and maintain applications through Vercel, Railway, Render and Netlify, troubleshooting deployment configuration issues as they arise.
- Integrate AI APIs into application backends and use AI assisted development tools to accelerate coding and technical research.
- Refine prompts and evaluate AI generated output through manual verification rather than accepting it directly.
- Build and test workflow automations using Zapier and Make.com, connecting triggers, actions and APIs.
- Research unfamiliar technologies and technical problems through documentation, experimentation and iterative testing.
- Learned UI/UX design and Figma during university and applied practical interface design principles to personal project frontends.

SELECTED PROJECTS

CodeFlow, AI Powered Coding Assistant Platform

Technology: JavaScript, React.js, Node.js, Express, MongoDB, REST APIs, Multi Provider AI Integration

- Built a live AI powered coding assistant platform with a React frontend and a Node.js and Express backend.
- Integrated Google Gemini as the primary AI provider and Groq's Llama 3 as a fallback provider for chat functionality.
- Added image generation through Hugging Face and Pollinations.
- Used a circuit breaker approach to handle provider failures and maintain application stability.
- Integrated MongoDB for application data and Paystack for billing.
- Worked through backend, frontend and deployment issues, including streaming response handling and platform configuration.
- Deployed and tested the application through Railway and Vercel, resolving environment and configuration issues along the way.
- Iteratively debugged and refined application behavior across multiple build and deployment cycles.

AI behavioral testing and evaluation:

- Conducted hands on behavioral testing through unexpected conversational scenarios to evaluate application response quality.
- Evaluated context handling and instruction adherence during multi turn conversations.
- Assessed response consistency across repeated and varied prompts.
- Tested how the application responded when new contextual information was introduced mid conversation.
- Evaluated whether the application distinguished conversational information from actual changes to its intended instructions.

GeorgePay, Fintech Web Application

Technology: TypeScript, React.js, REST APIs, Paystack, Authentication, Database Integration

- Built a fintech web application using TypeScript and React.js.
- Developed application functionality around REST APIs, connecting frontend workflows to backend logic.
- Integrated authentication to manage user access.
- Integrated database functionality to support application data.
- Integrated Paystack to support payment related workflows.
- Tested application behavior during development and resolved integration issues as they came up.
- Worked across frontend and backend integration requirements throughout the build.

RegisMeet, Meeting Web Application

Status: Active Development

Technology: Python, Upstash Redis, Redis, Neon, GitHub

- Developing meeting application functionality using Python, including backend logic for meeting data and application state.
- Using Upstash Redis for fast key based data access.
- Using Neon for persistent database infrastructure.
- Testing functionality iteratively and refining backend behavior as the project develops.
- Using GitHub throughout development for version control.

Verdant Foundation Website

Technology: React.js, JavaScript, Node.js, Neon

- Built a website for a foundation using React.js, JavaScript and Node.js, including a donations feature enabling users to contribute directly through the site.
- Used Neon as the database for storing application data.
- Built responsive user interfaces focused on practical usability rather than decorative design.

- Handled the development work end to end, from building the site to implementing the donations functionality.

AI Report Processing Prototype

Technology: Python, Google Colab, Groq API

- Built a practical prototype for processing student reports, school sheets and health reports using the Groq API.
- Used Google Colab for development and testing.
- Experimented with AI generated processing and structured output for different report types.
- Refined the workflow based on testing results rather than treating the first version as final.

AI ENGINEERING AND AUTOMATION

George has been learning and experimenting with AI engineering concepts through direct project work rather than formal production AI engineering roles. This includes AI API integration, LLM application development, prompt engineering and refinement, AI assisted software development, and evaluation of AI generated output for consistency, context handling and instruction adherence. He is developing familiarity with agentic AI concepts and AI application architecture through ongoing learning and experimentation, without formal production experience in frameworks such as CrewAI, AutoGen, LangGraph, LangChain, LlamaIndex or vLLM.

Workflow Automation Experiments

Technology: Zapier, Make.com, AI APIs, Webhooks, Gmail, Discord, CRM Integrations, API Based Workflows

- Built and tested workflow automations using Zapier and Make.com.
- Worked with Gmail integration as part of automation workflows.
- Used Discord as part of automation and notification workflows.
- Explored CRM integration flows, connecting triggers, actions and APIs.
- Experimented with AI powered business workflows and practical automation use cases for small and medium sized business operations.
- Continues developing knowledge of AI agents and AI powered workflows through hands on experimentation.

INDUSTRIAL TRAINING

National Television Authority (NTA)

- Performed technical hardware and software related responsibilities under supervision, alongside communication tasks, during university industrial training.
- Worked with staff across different units, applying practical troubleshooting to technical issues as they arose.

Option FM

- Assisted with technical hardware and software responsibilities during industrial training.
- Collaborated with team members and handled routine troubleshooting in a fast paced broadcast environment.

LEADERSHIP

University Field Research Project Team Lead | Nasarawa State University, Keffi

- Led a student field research team gathering information directly from business owners.
- Coordinated team activities and communicated research requirements clearly to team members.
- Worked with team members to gather information and organize findings from the field.
- Communicated research findings and observations to the wider project group.

EDUCATION

B.Sc. Mass Communication

Nasarawa State University, Keffi, Nigeria

CERTIFICATIONS

- Scientific Computing with Python, freeCodeCamp
- Mastercard Foundation PREP2SOAR, Technology and Professional Development
