

GEORGE OWULAMA ANDZUTSI

WEB DEVELOPER | REACT.JS | TYPESCRIPT | JAVASCRIPT | API INTEGRATIONS

Nigeria | Remote • +234 810 036 2060 • andzutsiowulama@gmail.com • github.com/evanandzutsi-eng • linkedin.com/in/george-andzutsi-833948268

PROFESSIONAL SUMMARY

Web Developer with hands-on experience building responsive web applications in React.js, TypeScript, and JavaScript, with a particular focus on connecting front-end interfaces to REST APIs and third-party services. Comfortable working across the full front-end workflow, from turning Figma designs into working interfaces to integrating and troubleshooting API-driven features. Has connected applications to automation platforms including Zapier and Make.com, and to payment services such as Paystack, with additional backend exposure through Node.js, Python, and FastAPI. Works regularly with Git, GitHub, Postman, and Docker, and has deployed applications on Vercel, Netlify, Railway, and Render. Brings a practical, detail-oriented approach to building clean, responsive, and maintainable interfaces that hold up in real use.

CORE SKILLS

Responsive Web Development	Frontend Development	React.js	JavaScript	TypeScript	HTML5 & CSS3	REST API Integration	Third-Party API Integration
Automation Integrations	API Troubleshooting	Website Troubleshooting	Bug Fixing	Performance Troubleshooting	Figma & UI/UX Design	Git & GitHub	Postman
Docker	Application Deployment	Technical Problem Solving					

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript, TypeScript, React.js, Reusable Components, Responsive UI Implementation

APIs & Integrations: REST APIs, Third-Party Integration, JWT, OAuth, Webhooks, Payment API Integration, Postman

Backend (exposure): Node.js, Python, FastAPI, REST API Development

Databases: MySQL, MongoDB, Supabase, Neon, Redis, Upstash

Design: Figma, UI/UX Design, Responsive Interface Design

Development Tools: Git, GitHub, Docker, Windows Terminal, PowerShell

Deployment: Vercel, Netlify, Railway, Render

Automation: Zapier, Make.com, API-Based Workflows, Third-Party Service Integrations

WEB DEVELOPMENT EXPERIENCE

Web Developer & Software Engineer — Independent Projects

Remote | 2024 - Present

- Build responsive web applications using React.js, JavaScript, TypeScript, HTML5, and CSS3, developing reusable components across projects.
- Turn Figma designs and interface concepts into functional, responsive React interfaces.
- Integrate REST APIs and connect applications to third-party services, including authentication-related functionality.
- Test API endpoints with Postman and work through issues across frontend, backend, and integration layers.
- Investigate bugs, apply fixes, and check results before considering an issue resolved.
- Use Git and GitHub for version control, working from Windows Terminal and PowerShell, with Docker where it makes sense.
- Deploy applications through Vercel, Netlify, Railway, and Render.
- Build automation workflows with Zapier and Make.com to connect applications and move data between services.
- Refine usability, reliability, and maintainability through ongoing testing and iteration.

FEATURED PROJECTS

GeorgePay — Fintech Web Application

TypeScript • React.js • REST APIs • Paystack • Authentication

- Built GeorgePay end-to-end in TypeScript and React.js, with a focus on clean, responsive interface development.
- Integrated Paystack for payment processing, handling communication between the frontend and the payment API.
- Implemented authentication and session handling to manage user access within the application.
- Connected the frontend to REST API endpoints and tested request/response handling with Postman.
- Worked through issues spanning frontend logic, API integration, and authentication flow.

CodeFlow — Software Development Platform

JavaScript • React.js • REST APIs

- Built CodeFlow's frontend in JavaScript and React.js, developing reusable components for core interface elements.
- Integrated REST APIs to handle application data and requests, managing frontend logic around API responses.
- Debugged frontend and API request-handling issues, testing changes before deployment.
- Used Git and GitHub throughout for version control and change tracking.

RegisMeet — Meeting Web Application (Active Development)

Python • Upstash • Redis • Neon • GitHub

- Currently building RegisMeet in Python, working on backend logic and data persistence.
- Using Redis through Upstash and Neon as part of the data layer, with GitHub for version control throughout.

API & THIRD-PARTY INTEGRATION EXPERIENCE

- Integrating REST APIs into frontend applications and handling data exchange between connected services.
- Connecting applications to third-party services and payment platforms, including Paystack.
- Working with authentication approaches including JWT and OAuth, and webhook-based data exchange.
- Testing and checking API endpoints with Postman before and after integration.
- Working through integration issues between frontend, backend, and external services.

AUTOMATION EXPERIENCE

- Building automation workflows using Zapier and Make.com, connecting APIs and third-party services to move data between them.
- Setting up triggers and actions, then testing workflows and fixing failed or inconsistent triggers.

UI/UX & FIGMA EXPERIENCE

- Practical Figma experience developed through university projects and independent learning.
- Comfortable working with interface layouts, typography, and spacing directly from design files.
- Translating Figma designs into functional, responsive React interfaces.
- Applying UI/UX principles to keep interfaces clear, consistent, and user-focused.
- Able to communicate clearly with designers when implementing design specifications.

RESPONSIVE WEB DEVELOPMENT

- Building responsive layouts that adapt across desktop, tablet, and mobile screens.
- Developing flexible, reusable components with HTML, CSS, and React.
- Applying responsive design principles, including flexible grids and media queries.
- Considering cross-browser behavior during development and testing.
- Structuring clean, user-friendly navigation and page layouts.

WEBSITE PERFORMANCE & BUG FIXING

Approach: Reproduce → Investigate → Identify → Fix → Test → Validate

- Fixing frontend bugs affecting layout, functionality, or user interaction.
- Working through API and integration issues between frontend and backend systems.
- Investigating errors and unexpected application behavior, checking for regressions after fixes.
- Validating fixes through manual testing before considering an issue resolved.

DEVELOPMENT & DEPLOYMENT

- Using Git and GitHub for version control and collaboration.
- Testing API endpoints and workflows with Postman; using Docker where appropriate.
- Working in Windows Terminal and PowerShell as part of the development workflow.
- Deploying applications using Vercel, Netlify, Railway, and Render.

INDUSTRIAL TRAINING & TEAM LEADERSHIP

National Television Authority (NTA)

Industrial Training | Nigeria

- Served as team lead, coordinating information gathering within the group.
- Compiled team-collected information into structured documents (Word, PDF) for submission to editors.
- Communicated with editors on submitted materials and coordinated the team to meet deadlines.

Option FM

Industrial Training | Nigeria

- Monitored radio transmitters and related broadcast equipment as part of daily technical operations.
- Assisted with maintenance tasks on transmitter and broadcast machinery alongside technical staff.
- Developed practical attention to detail and technical problem-solving through hands-on equipment monitoring.

University Field Research Project — Team Lead

- Led a student team gathering information directly from business owners through structured questions, recording information accurately and coordinating team members throughout.
- Resolved challenges that came up during fieldwork and worked collaboratively to complete the assignment.

EDUCATION

Bachelor of Science (B.Sc.) in Mass Communication — Nasarawa State University, Keffi, Nigeria

CERTIFICATIONS

- Scientific Computing with Python — freeCodeCamp
- Mastercard Foundation PREP2SOAR — Technology and Professional Development

PROFESSIONAL STRENGTHS

Problem Solving	Analytical Thinking	Technical Troubleshooting	Attention to Detail	UI/UX Awareness	Clear Communication	Team Collaboration
Independent Learning	Adaptability	Technical Research	Documentation	Ownership	Continuous Improvement
